  Computer Engineering   **CGPA**: 7.7

PROJECTS

Online Job Portal

The Online Job Portal is like a website where people can find jobs and companies can hire new employees. If you're looking for a job, you can easily sign up and search for job openings based on where you want to work and what kind of job you want. When you find a job you like, you can apply for it right there by uploading your resume.

For companies, they can post job openings and describe what they're looking for in an employee. The people who run the website make sure everything is working smoothly and handle things like approving job postings and managing user accounts. The website keeps everyone's information safe and makes sure it runs quickly so people can find jobs and companies can find employees easily.
